

Adaptation Detective

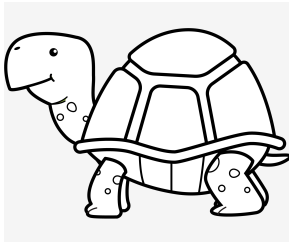

Look closely at each animal. Find one body part that helps it survive. Write what you see, then what you think it does.

For the grown-up: *The first line is an observation (what you can see). The second is an inference (your idea about why).*

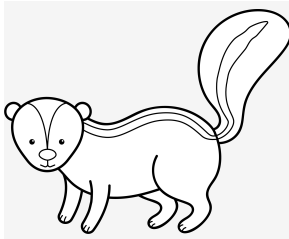

I see (body part):

I think it helps the animal by:

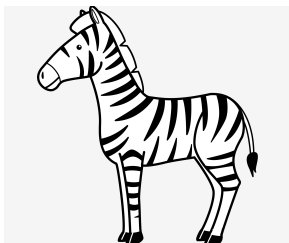

I see (body part):

I think it helps the animal by:

I see (body part):

I think it helps the animal by:

I see (body part):

I think it helps the animal by:

1. Pick one animal. What evidence supports your idea? Could that body part help in more than one way?
